The Carbon Transition

- ◆ Carbon Transition - fundamental changes required to move society and the global economy to a low carbon pathway
- ◆ Gaps:
 - **Implementation** – achieving agreed goals
 - **Ambition** – not making enough difference
- ◆ Tools and techniques include carbon trading, carbon accounting and policy performance bonds
- ◆ Financial Centres are part of the solution
 - Promoting investment in critical sectors and technologies
 - Investigating innovative financial products and services
 - Identifying and ameliorating transition risk exposure
 - Lobbying for regulations and standards on carbon accounting to ensure that carbon costs are factored into valuations and risk assessments

World Carbon Markets - Total value by segment

Refinitiv, February 2023

Growth In Carbon Trading

- ◆ We asked respondents to the GGFI survey to assess the proportion of global emissions that they thought will be covered by carbon pricing schemes by 2030
- ◆ The highest percentage of respondents (59%) considered that over 30% of emissions will be within carbon pricing schemes by 2030
